

		Palovarotene Dosing		Treatment Duration
		Adult Cohort	Pediatric Cohort	
Dosing Regimen	Chronic	5 mg	None*	Daily
	Acute Flare-Up Dose	20 mg	Weight adjusted equivalent	Up to 28 days (4 weeks)
		10 mg	Weight adjusted equivalent	At least 56 days (8 weeks)
		<p>The first dose will be taken upon flare-up confirmation by the principal investigator</p> <p>Dose reductions will occur if the dose is not tolerated</p>		<p>The total treatment duration is 84 days (12 weeks)</p> <p>Treatment may be extended if the flare-up is ongoing at Day 84 and continue until the flare-up resolves</p>

*The safety and efficacy of chronic dosing needs to be evaluated in the adult cohort before it can be used in actively growing children in the pediatric cohort.
